## **Load sharing & Synchronization**

Synchronization is the process of matching voltage, frequency, waveforms of generator, phase angle, phase sequence and other such parameters to a running power system. A generator cannot deliver power unless these parameters are exactly matched with the network. Synchronization controls the exciter current and the engine speed of the generator.

## **Auto/Manual Change Over Switches**

Get automatic transfer switch rental solutions that seamlessly switch between utility and generator power. Order our premium ATS units with busbar termination, auto/manual transfer modes, and 250A-800A ratings. Choose the best rental transfer switches now. Reserve transfer switch rentals to keep operations running 24/7.
